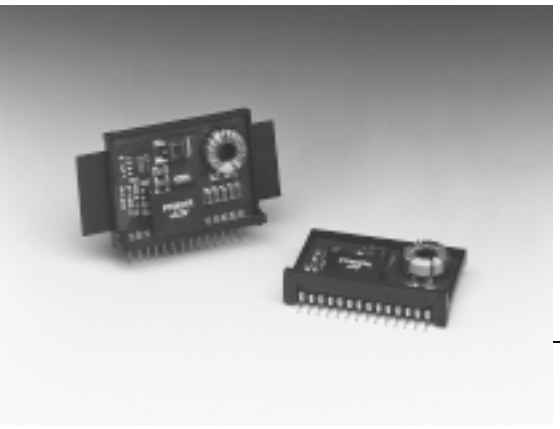
PT6620 Series

6 A 12-V Input Integrated Switching Regulator



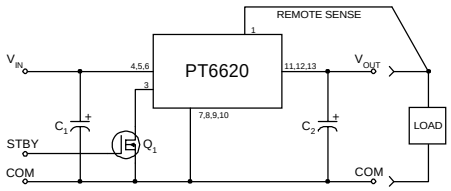
Features

- Single Device: 6-A Output
- Input Voltage Range: 9 V to 16 V
- Adjustable Output Voltage
- 83 % Efficiency
- Remote Sense Capability
- Standby Function
- Over-Temperature Protection
- 16-pin Mount Option (Suffixes L, M, Q, & F)

Description

The PT6620 series is a line of 12-V input Integrated Switching Regulators (ISRs). These regulators are designed for stand-alone operation in applications requiring as much as 6 A of output current. The PT6620 series is packaged in a 14-Pin SIP (Single In-line Package), which is available in either a vertical or horizontal configurations, including surface mount.

Standard Application



C_1 = Required 330µF electrolytic (1)
C_2 = Required 330µF electrolytic (1)
Q_1 = Optional N-Channel MOSFET

Pin Configuration

Adjusting the Output Voltage of the PT6620 6 A, 12-V Bus Converter Series

The output voltage of the Power Trends PT6620 Series ISRs may be adjusted higher or lower than the factory trimmed pre-set voltage with the addition of a single external resistor. Table 1 accordingly gives the allowable adjustment range for each model in the series as V_a (min) and V_a (max).

Adjust Up: An increase in the output voltage is obtained by adding a resistor R_2, between *V_o Adjust* (pin 14) and *GND* (pins 7-10).

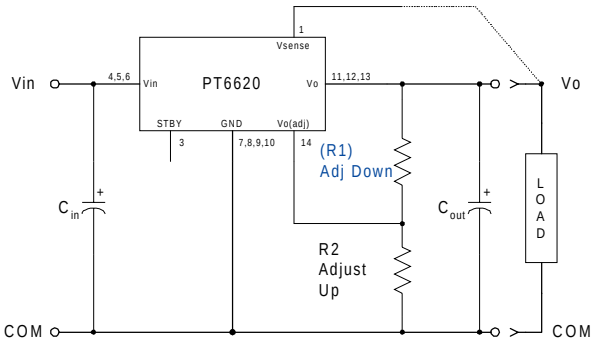
Adjust Down: Add a resistor (R_1), between *V_o Adjust* (pin 14) and *V_{out}* (pins 11-13).

Refer to Figure 1 and Table 2 for both the placement and value of the required resistor, either (R_1) or R_2 as appropriate.

Notes:

1. Use only a single 1% resistor in either the (R_1) or R_2 location. Place the resistor as close to the ISR as possible.
2. Never connect capacitors from V_o Adjust to either GND, V_{out}, or the Remote Sense pin. Any capacitance added to the V_o adjust pin will affect the stability of the ISR.
3. If the Remote Sense feature is being used, connecting the resistor (R_1) between V_o Adjust (pin 14) and Remote Sense (pin 1) can benefit load regulation.
4. The minimum input voltage required by the part is V_{out} + 3, or 9 V, whichever is higher.

Figure 1



The values of (R_1) [adjust down], and R_2 [adjust up], can also be calculated using the following formulae.

$$(R_1) = \frac{R_o\,(V_a - 1.25)}{(V_o - V_a)} - R_s \quad k\Omega$$

$$R_2 = \frac{1.25\,R_o}{V_a - V_o} - R_s \quad k\Omega$$

Where: V_o = Original output voltage
V_a = Adjusted output voltage
R_o = The resistance value in Table 1
R_s = The series resistance from Table 1

Using the Standby Function on the PT6620 Series of 12-V Bus Converters

For applications requiring output voltage On/Off control, the 14-pin PT6620 ISR series incorporates a standby function. This feature may be used for power-up/shut-down sequencing, and wherever there is a requirement for the output status of the module to be controlled by external circuitry.

The standby function is provided by the *STBY** control, pin 3. If pin 3 is left open-circuit the regulator operates normally, providing a regulated output whenever a valid supply voltage is applied to V_{in} (pins 4, 5, & 6) with respect to *GND* (pins 7-10). Connecting pin 3 to ground [1] will disable the regulator output and reduce the input current to less than 30 mA [3]. Grounding the standby control will also hold-off the regulator output during the period that input power is applied.

The standby input is ideally controlled with an open-collector (or open-drain) discrete transistor (See Figure 1). It can also be driven directly from a dedicated TTL [2] compatible gate. Table 1 provides details of the threshold requirements.

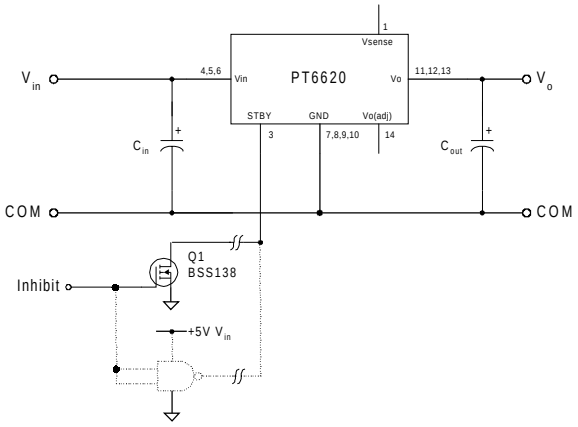
Table 1 Inhibit Control Thresholds [(1,2)]

Parameter	Min	Max
Enable (VIH)	1 V	5 V
Disable (V_{IL})	–0.1V	0.3V

Notes:

1. The Standby input on the PT6620 regulator series may be controlled using either an open-collector (or open-drain) discrete transistor, or a device with a totem-pole output. A pull-up resistor is not necessary. The control input has an open-circuit voltage of about 1.5 Vdc. To disable the regulator output, the control pin must be "pulled" to less than 0.3 Vdc with a low-level 0.25 mA max. sink to ground.
2. The Standby input on the PT6620 series is also compatible with TTL logic. A standard TTL logic gate will meet the 0.3 V V_{IL}(max) requirement (Table 1) at 0.25 mA sink current. *Do not* drive the Standby control input above 5 Vdc.
3. When the regulator output is disabled the current drawn from the input source is reduced to approximately 15 mA (30 mA maximum).
4. The turn-off time of Q_1, or rise time of the standby input is not critical on the PT6620 series. Turning Q_1 off slowly, over periods up to 100 ms, will not damage the regulator. However, a slow turn-off time will increase both the initial delay and rate-of-rise of the output voltage.

Figure 1



Turn-On Time: Turning Q_1 in Figure 1 off, removes the low-voltage signal at pin 3 and enables the output. The PT6620 series of regulators will provide a fully regulated output voltage within 20ms. The actual turn-on time may vary with load and the total amount of output capacitance. Figure 2 shows the typical output voltage waveform of a PT6625 (5 V) following the prompt turn off of Q_1 at time t =0 secs. The waveform was measured with a 12-V input voltage, and 5-A resistive load.

Figure 2

[1] The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

[2] Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

[3] MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

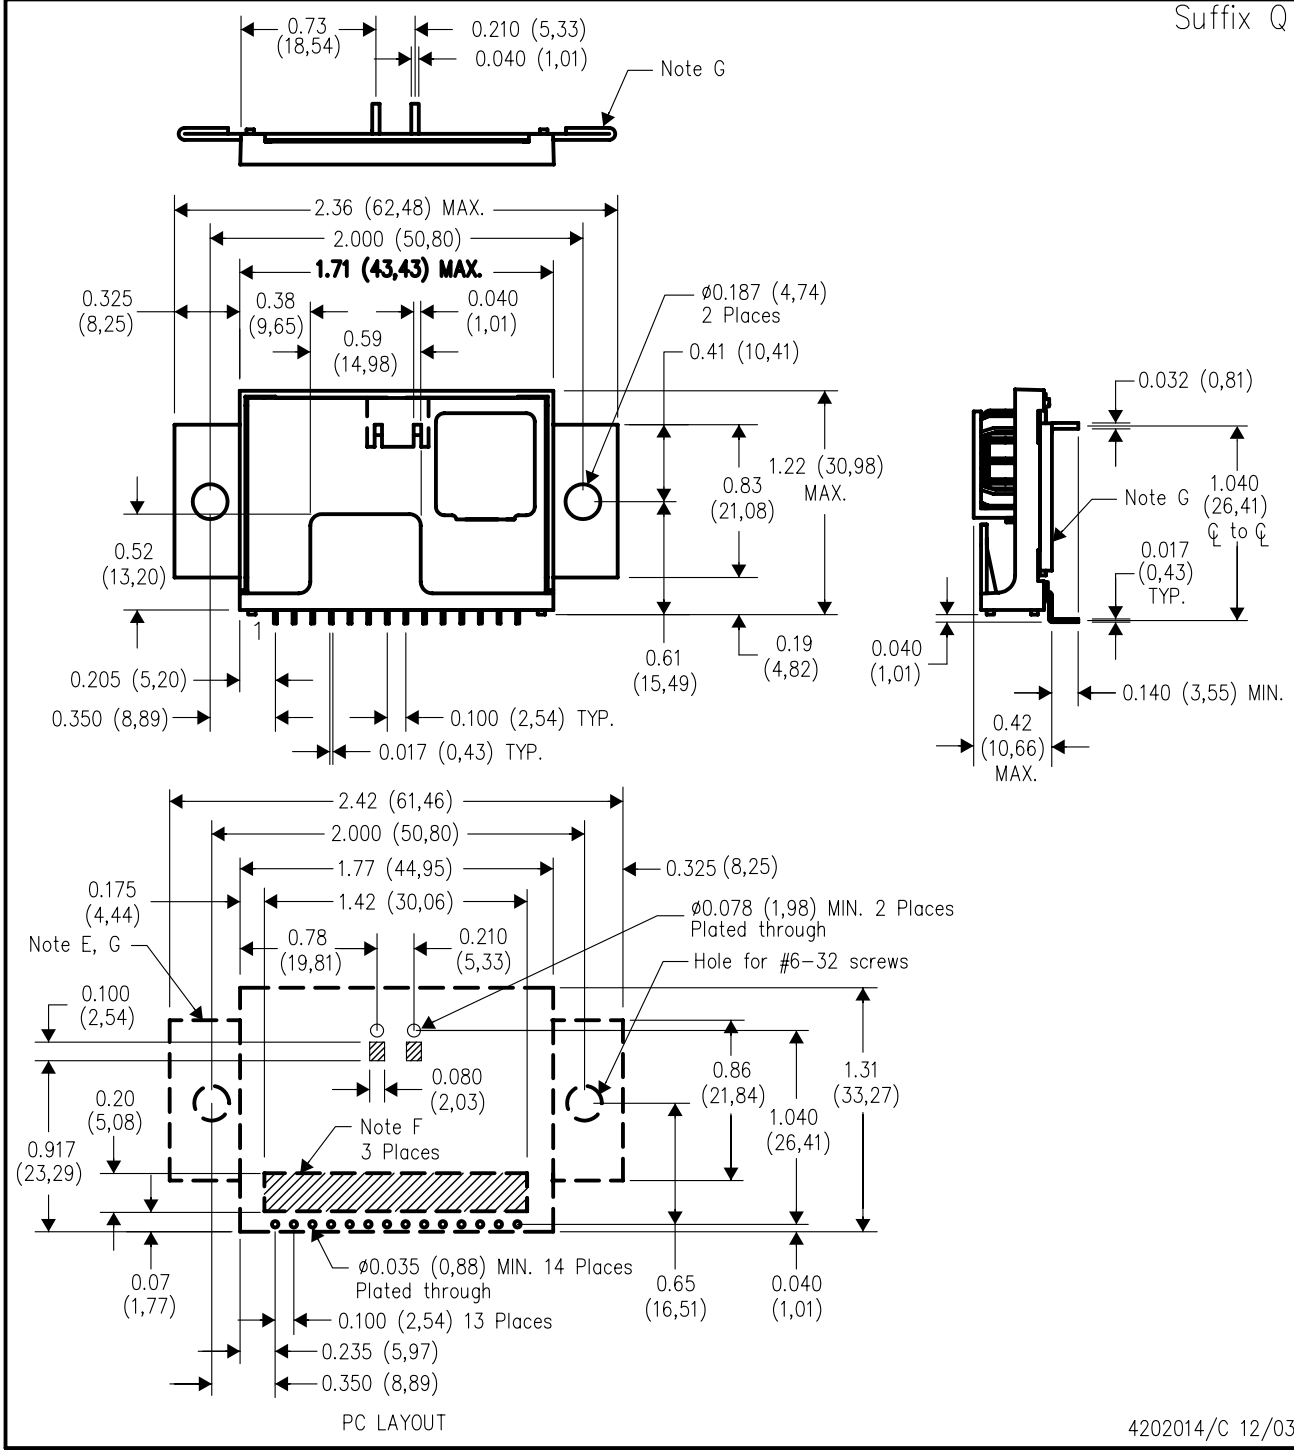
Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is

provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

EEQ (R–PSIP–T14) PLASTIC SINGLE–IN–LINE MODULE

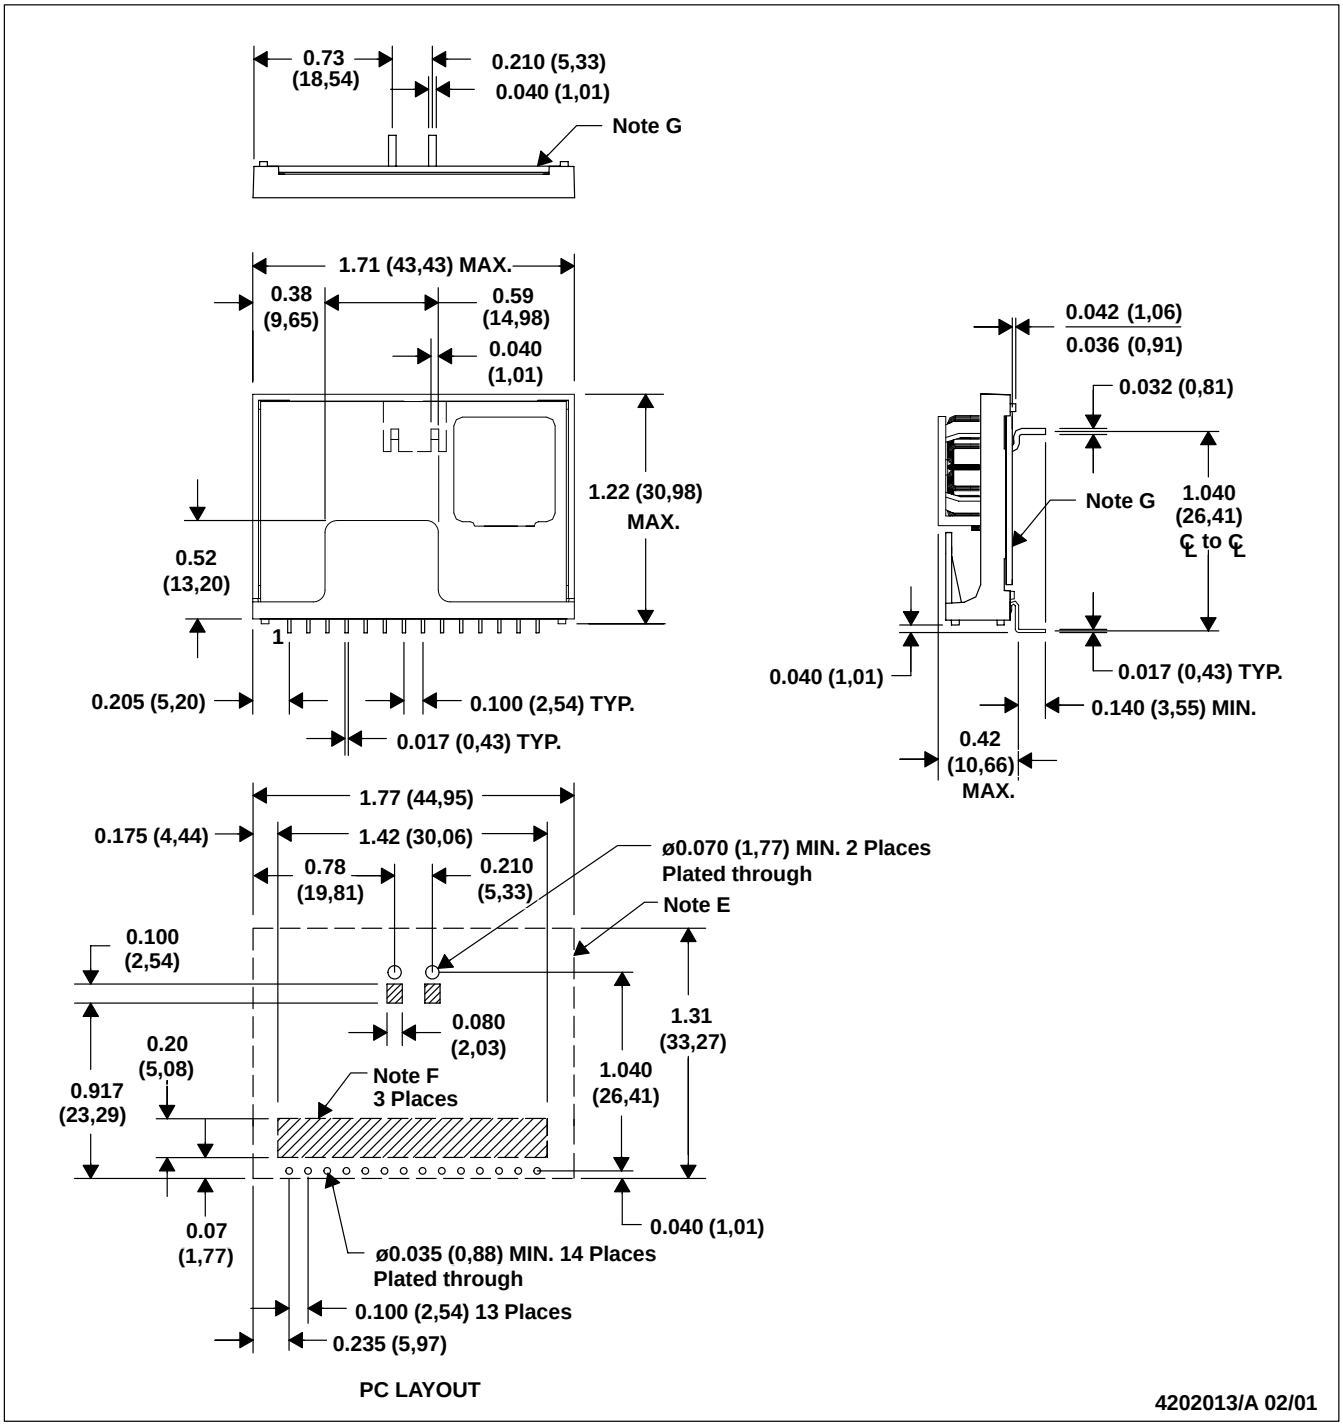
Suffix Q



NOTES:
A. All linear dimensions are in inches (mm).
B. This drawing is subject to change without notice.
C. 2 place decimals are ±0.030 (±0,76mm).
D. 3 place decimals are ±0.010 (±0,25mm).
E. Recommended mechanical keep out area.
F. No copper, power or signal traces in this area.
G. The metal tab is isolated but electrically conductive. No signal traces are allowed under the metal tab area. A solid copper island is recommended, which may be grounded to the two underside pins.

MPSI021 – MARCH 2001

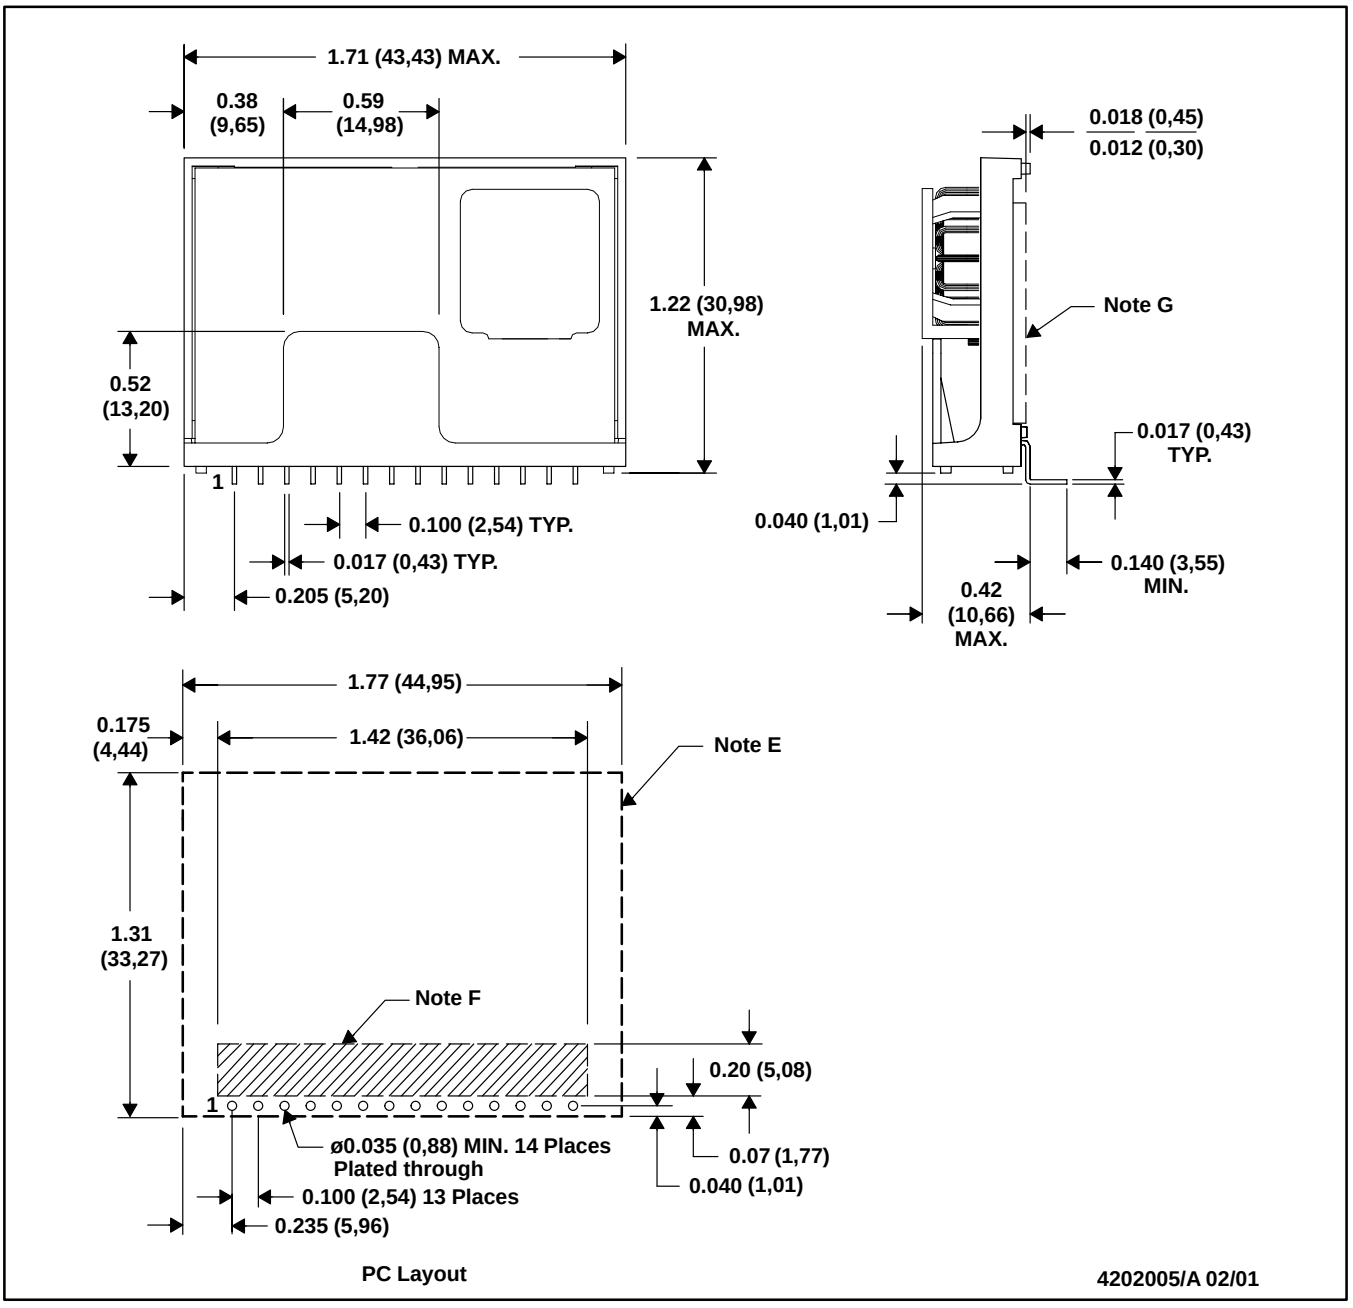
EEM (R–PSIP–T14) **PLASTIC SINGLE-IN-LINE MODULE**



NOTES:
A. All linear dimensions are in inches (mm).
B. This drawing is subject to change without notice.
C. 2-place decimals are ± 0.030 (± 0,76 mm).
D. 3-place deciamals are ± 0.010 (± 0,25 mm).
E. Recommended mechanical keep-out area.
F. No copper, power or signal traces in this area.
G. The metal tab is isolated but electrically conductive. No signal traces are allowed under the metal tab area. A solid copper island is recommended, which may be grounded to the two underside pins.

MPSI013 – MARCH 2001

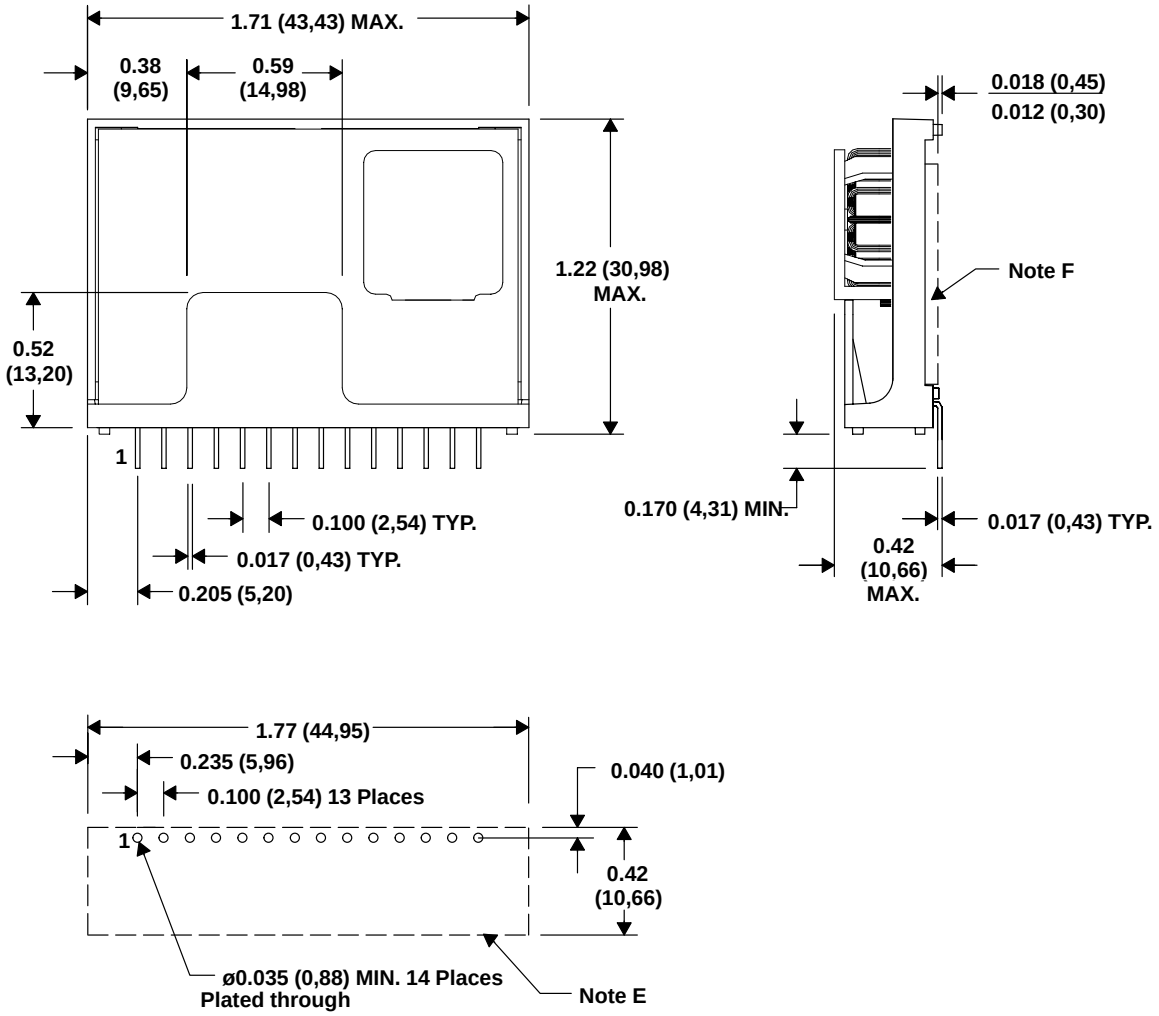
EEA (R–PSIP–T14) **PLASTIC SINGLE-IN-LINE MODULE**



NOTES:
A. All linear dimensions are in inches (mm).
B. This drawing is subject to change without notice.
C. 2-place decimals are ± 0.030 (± 0,76 mm).
D. 3-place decimals are ± 0.010 (± 0,25 mm).
E. Recommended mechanical keep-out area.
F. No copper, power or signal traces in this area.
G. D-suffix parts include a metal heat spreader.
No signal traces are allowed under the heat spreader area.
A solid copper island is recommended, which may be grounded.
A-suffix does not include a metal heat spreader.

MPSI017 – MARCH 2001

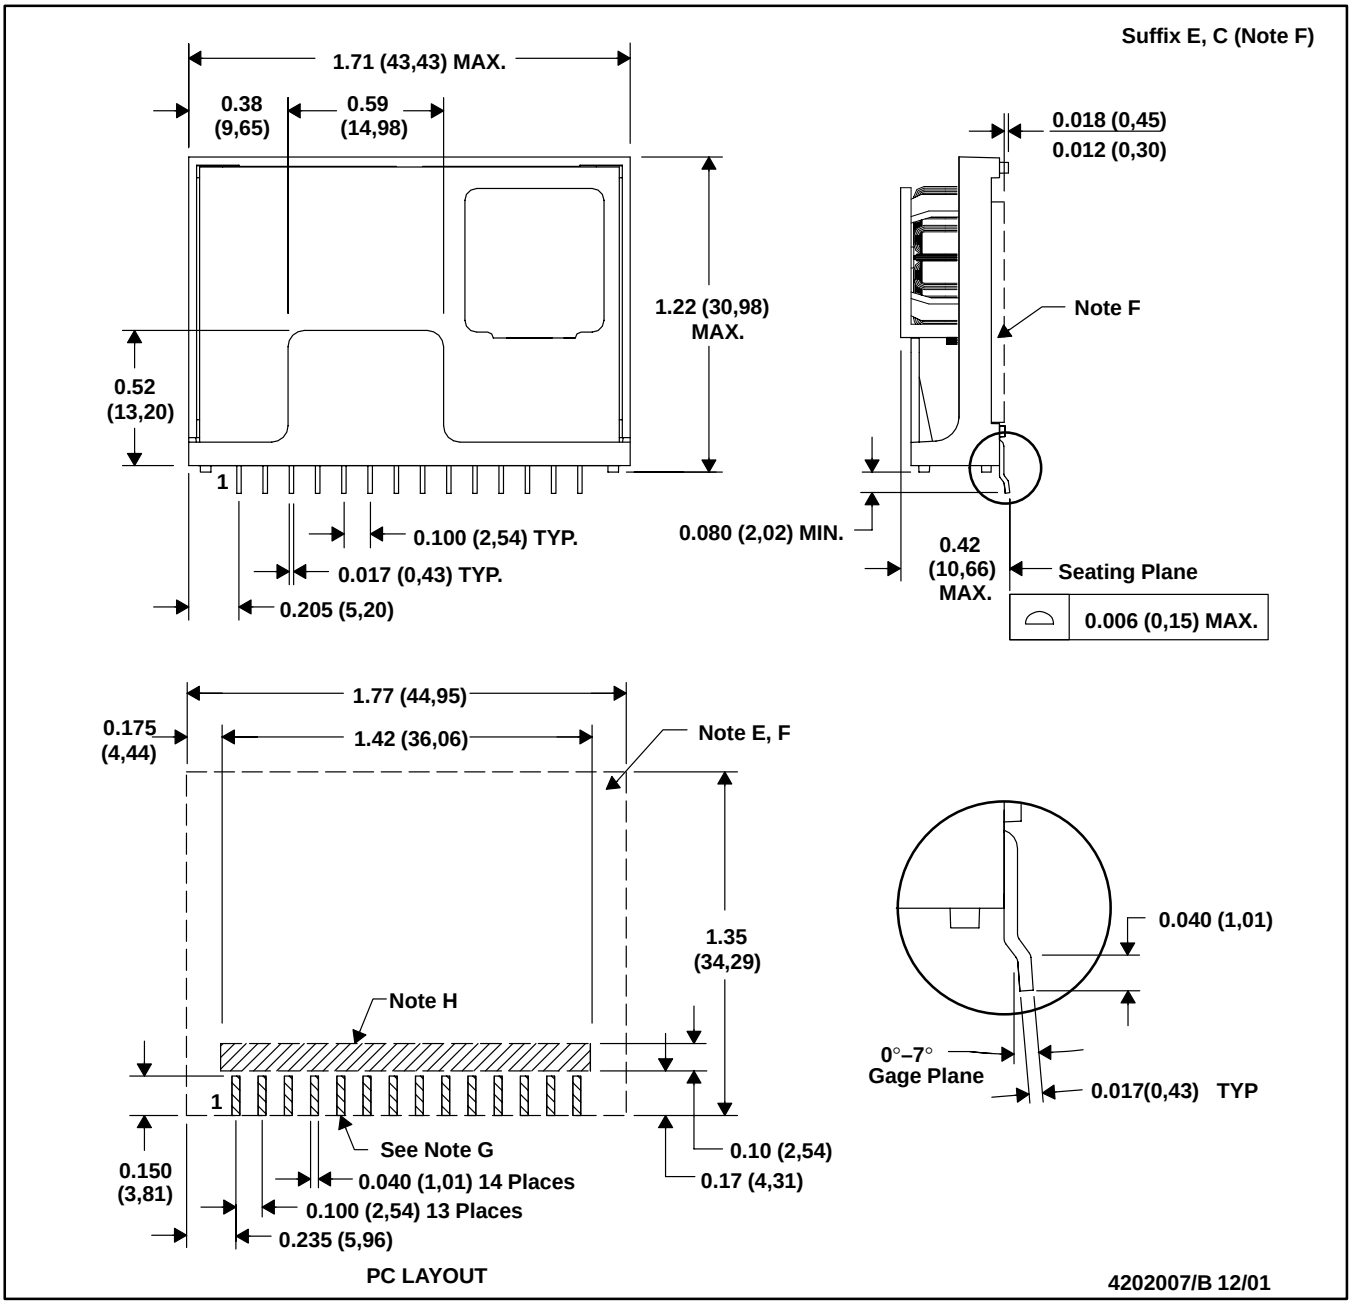
EED (R–PSIP–T14) **PLASTIC SINGLE-IN-LINE MODULE**



NOTES: A. All linear dimensions are in inches (mm).
B. This drawing is subject to change without notice.
C. 2-place decimals are ± 0.030 (± 0,76 mm).
D. 3-place decimals are ± 0.010 (± 0,25 mm).
E. Recommended mechanical keep-out area.
F. P-suffix parts include a metal heat spreader.
The heat spreader is isolated but electrically conductive, it can be grounded.
N-suffix does not include a metal heat spreader.

MPSI015A – MARCH 2001 – REVISED JANUARY 2002

EEC (R–PSIP–G14) **PLASTIC SINGLE-IN-LINE MODULE**

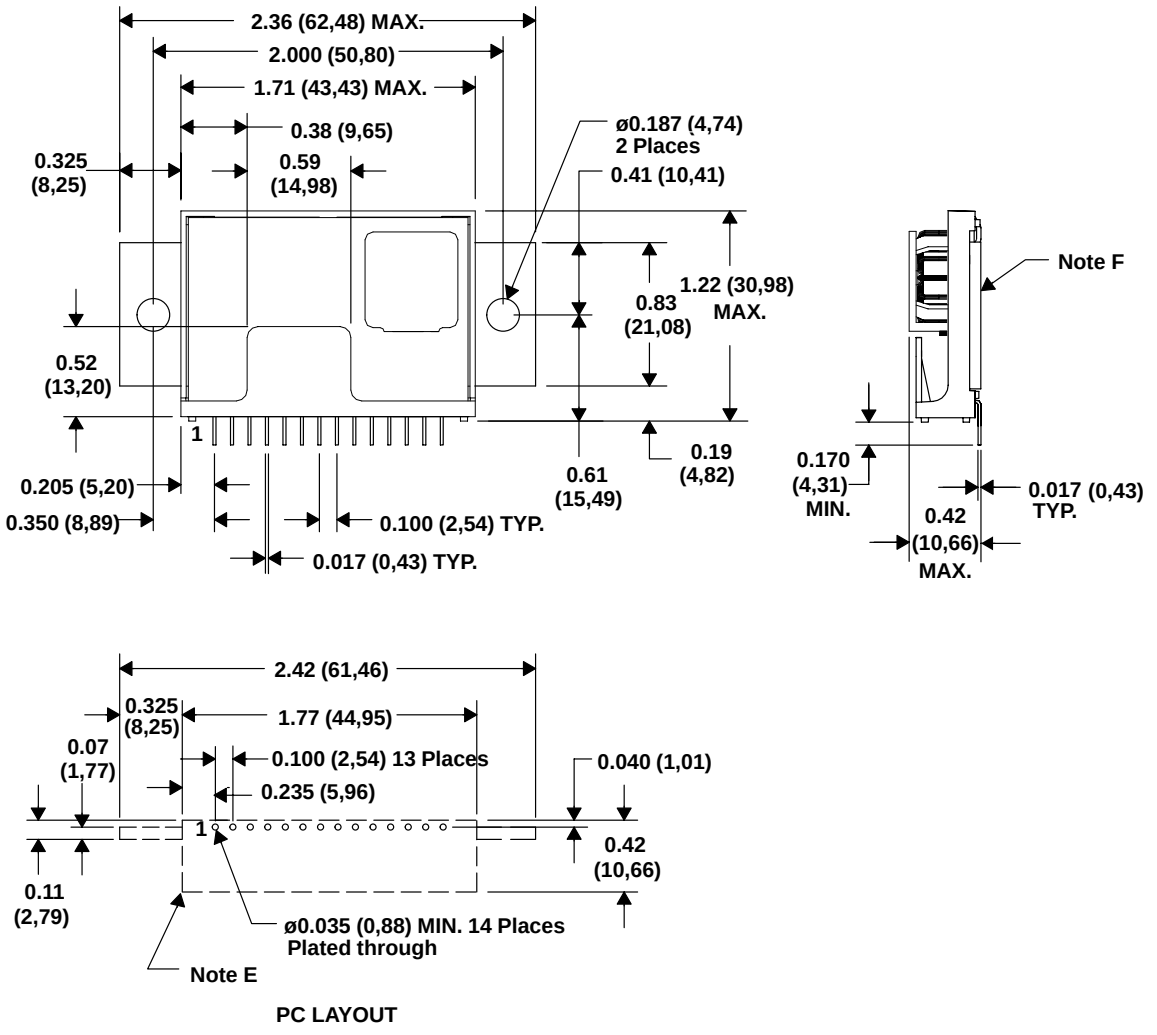


NOTES:
A. All linear dimensions are in inches (mm).
B. This drawing is subject to change without notice.
C. 2–place decimals are ± 0.030 (± 0, 76 mm).
D. 3–place decimals are ± 0.010 (± 0, 25 mm).
E. Recommended mechanical keep-out area.
F. E-suffix parts include a metal heat spreader.
No signal traces are allowed under the heat spreader area.
A solid copper island is recommended, which may be grounded.
C-suffix does not include a metal heat spreader.
G. Power pin connections should utilize two or more vias per input, ground and output pin.
H. No copper, power or signal traces in this area.

MPSI018A – MARCH 2001 – REVUSED FEBRUARY 2002

EEE (R–PSIP–T14) **PLASTIC SINGLE-IN-LINE MODULE**

Suffix R

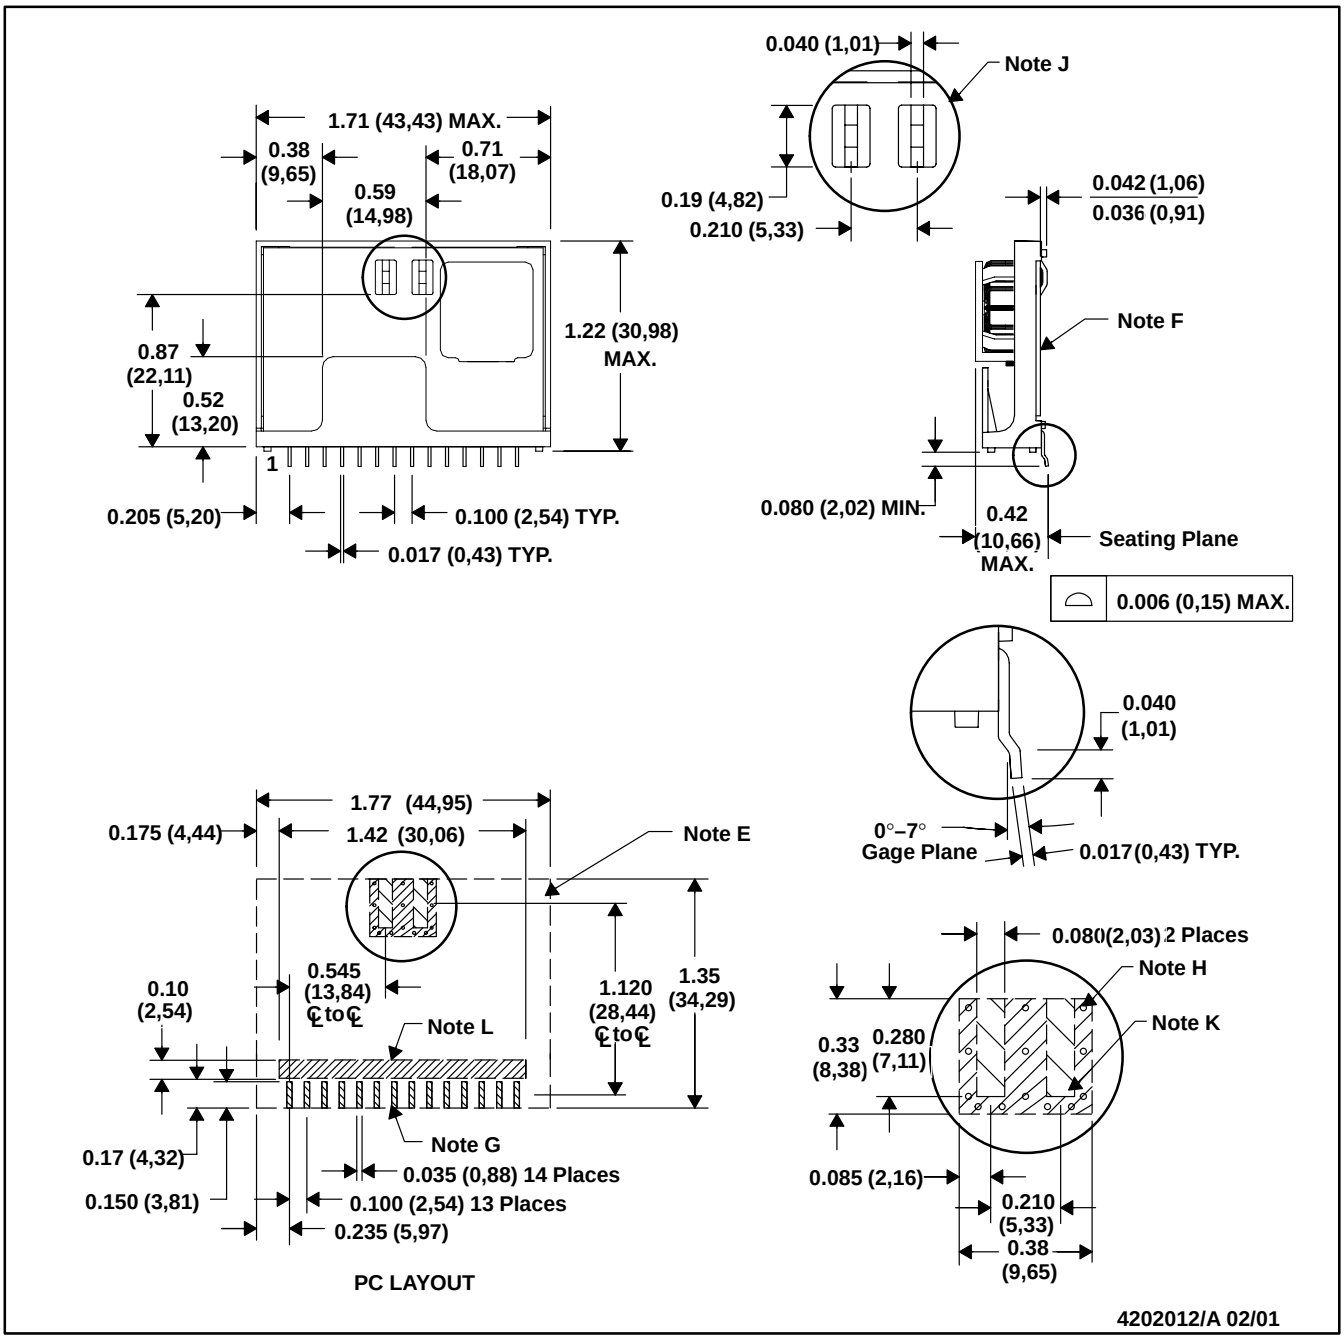


PC LAYOUT

4202010/B 02/02

NOTES: A. All linear dimensions are in inches (mm).
B. This drawing is subject to change without notice.
C. 2-place decimals are ± 0.030 (± 0,76 mm).
D. 3-place decimals are ± 0.010 (± 0,25 mm).
E. Recommended mechanical keep-out area.
F. The metal tab is isolated but electrically conductive, it can be grounded.

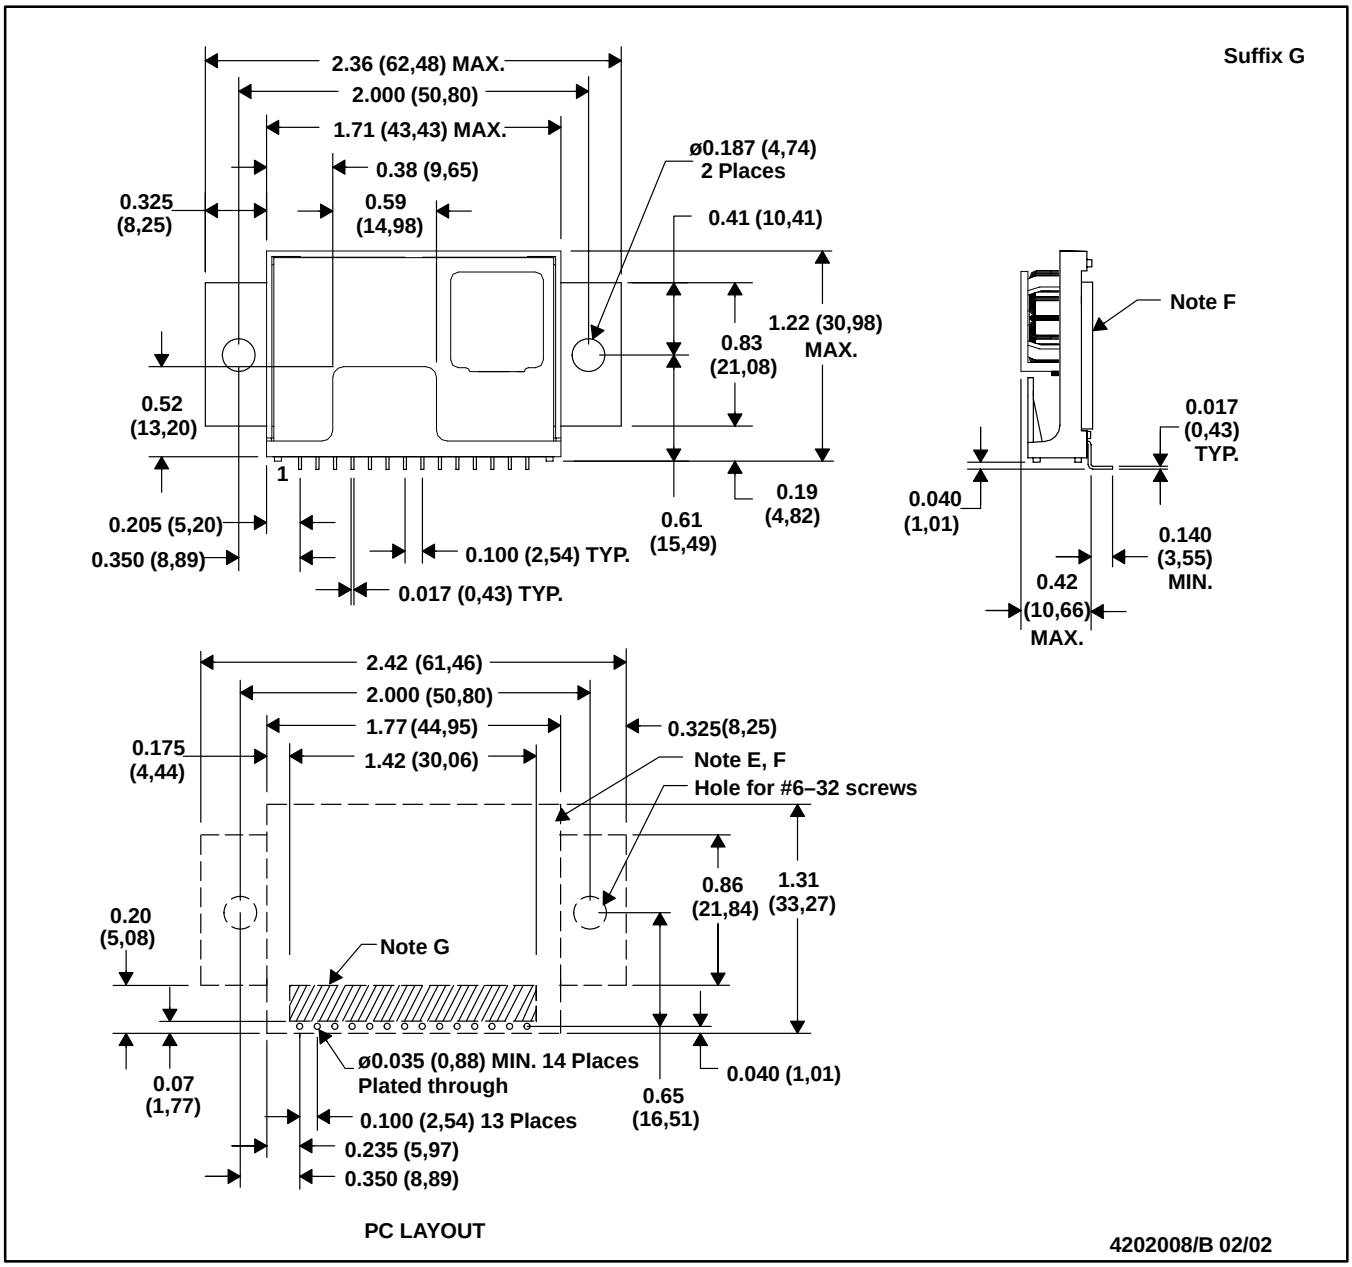
EEL (R–PSIP–G14) **PLASTIC SINGLE-IN-LINE MODULE**



NOTES:
A. All linear dimensions are in inches (mm).
B. This drawing is subject to change without notice.
C. 2–place decimals are ± 0.030 (± 0,76 mm).
D. 3–place decimals are ± 0.010 (± 0,25 mm).
E. Recommended mechanical keep-out area.
F. The metal tab is isolated but electrically conductive. No signal traces are allowed under the metal tab area. A solid copper island is recommended, which may be grounded.
G. Power pin connections should utilize two or more vias per input, ground and output pin.
H. Minimum copper land area required for solder tab. Vias are recommended to improve copper adhesion or connect land to other ground area.
J. Underside solder tabs detail
K. Solder mask openings to copper island for solder joints to mechanical pins.
L. No copper, power or signal traces in this area.

MPSI016A – MARCH 2001 – REVISED FEBRUARY 2002

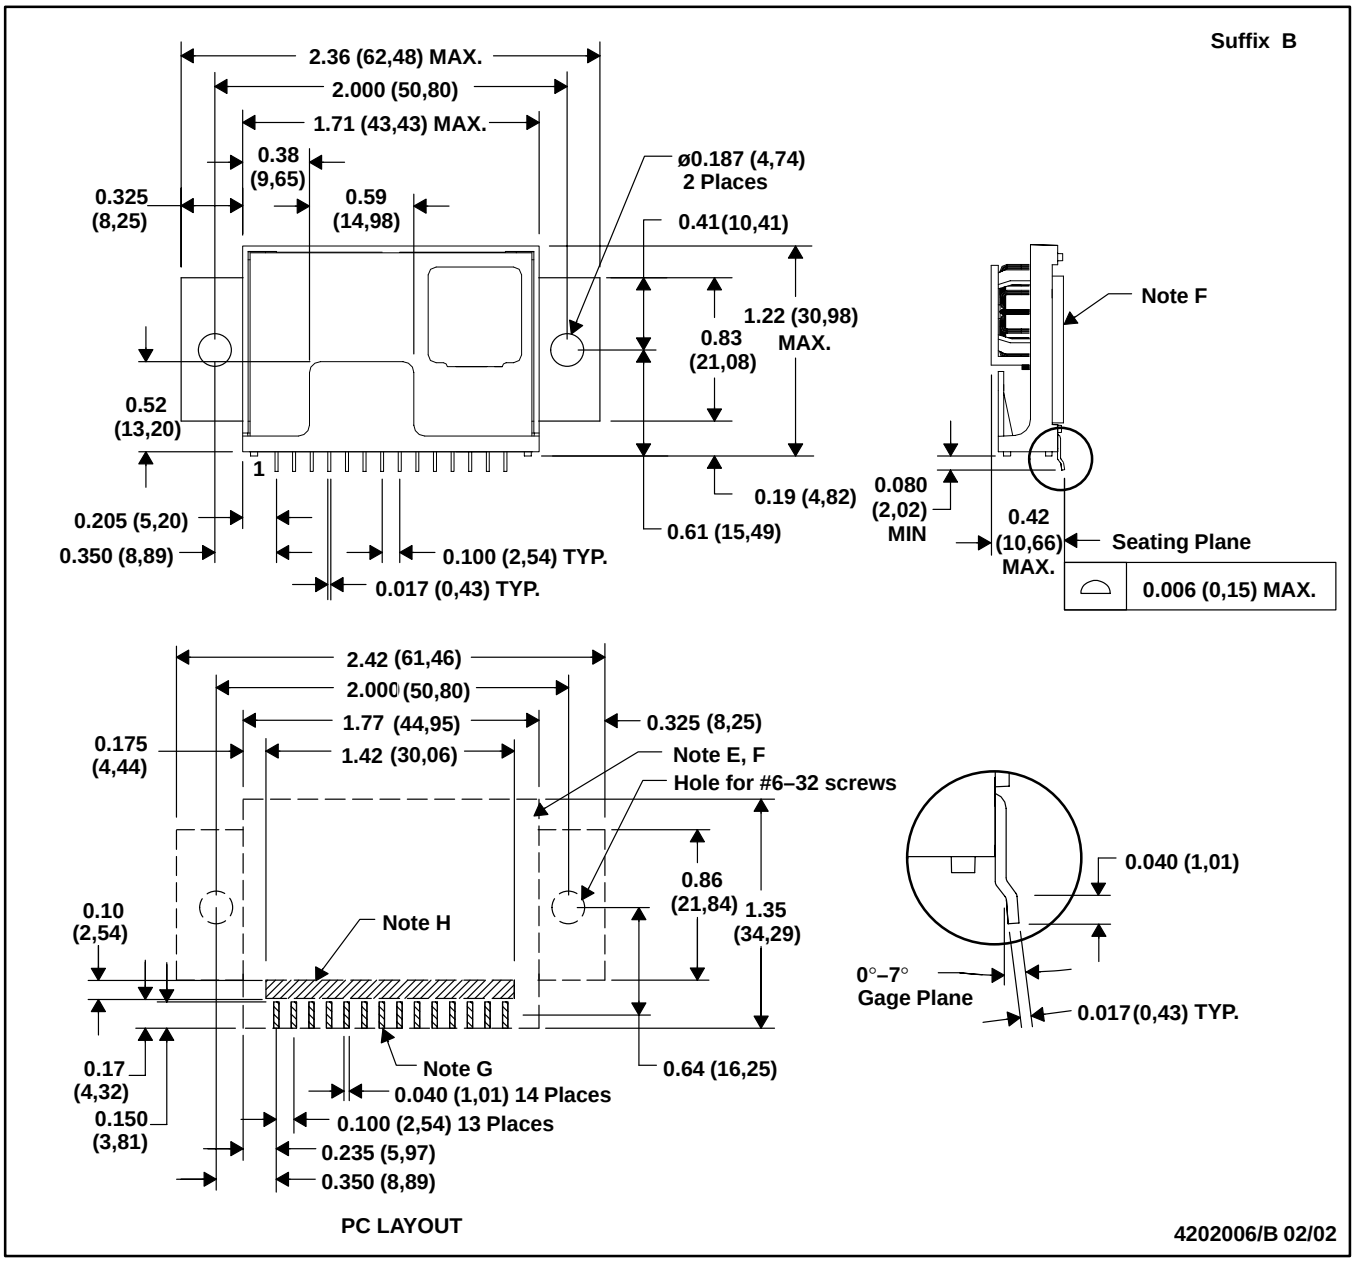
EEG (R–PSIP–T14) **PLASTIC SINGLE-IN-LINE MODULE**



NOTES:
A. All linear dimensions are in inches (mm).
B. This drawing is subject to change without notice.
C. 2-place decimals are ± 0.030 (± 0,76 mm).
D. 3-place decimals are ± 0.010 (± 0,25 mm).
E. Recommended mechanical keep-out area.
F. The metal tab is isolated but electrically conductive.
No signal traces are allowed under the metal tab area.
A solid copper island is recommended, which may be grounded.
G. No copper, power or signal traces in this area.

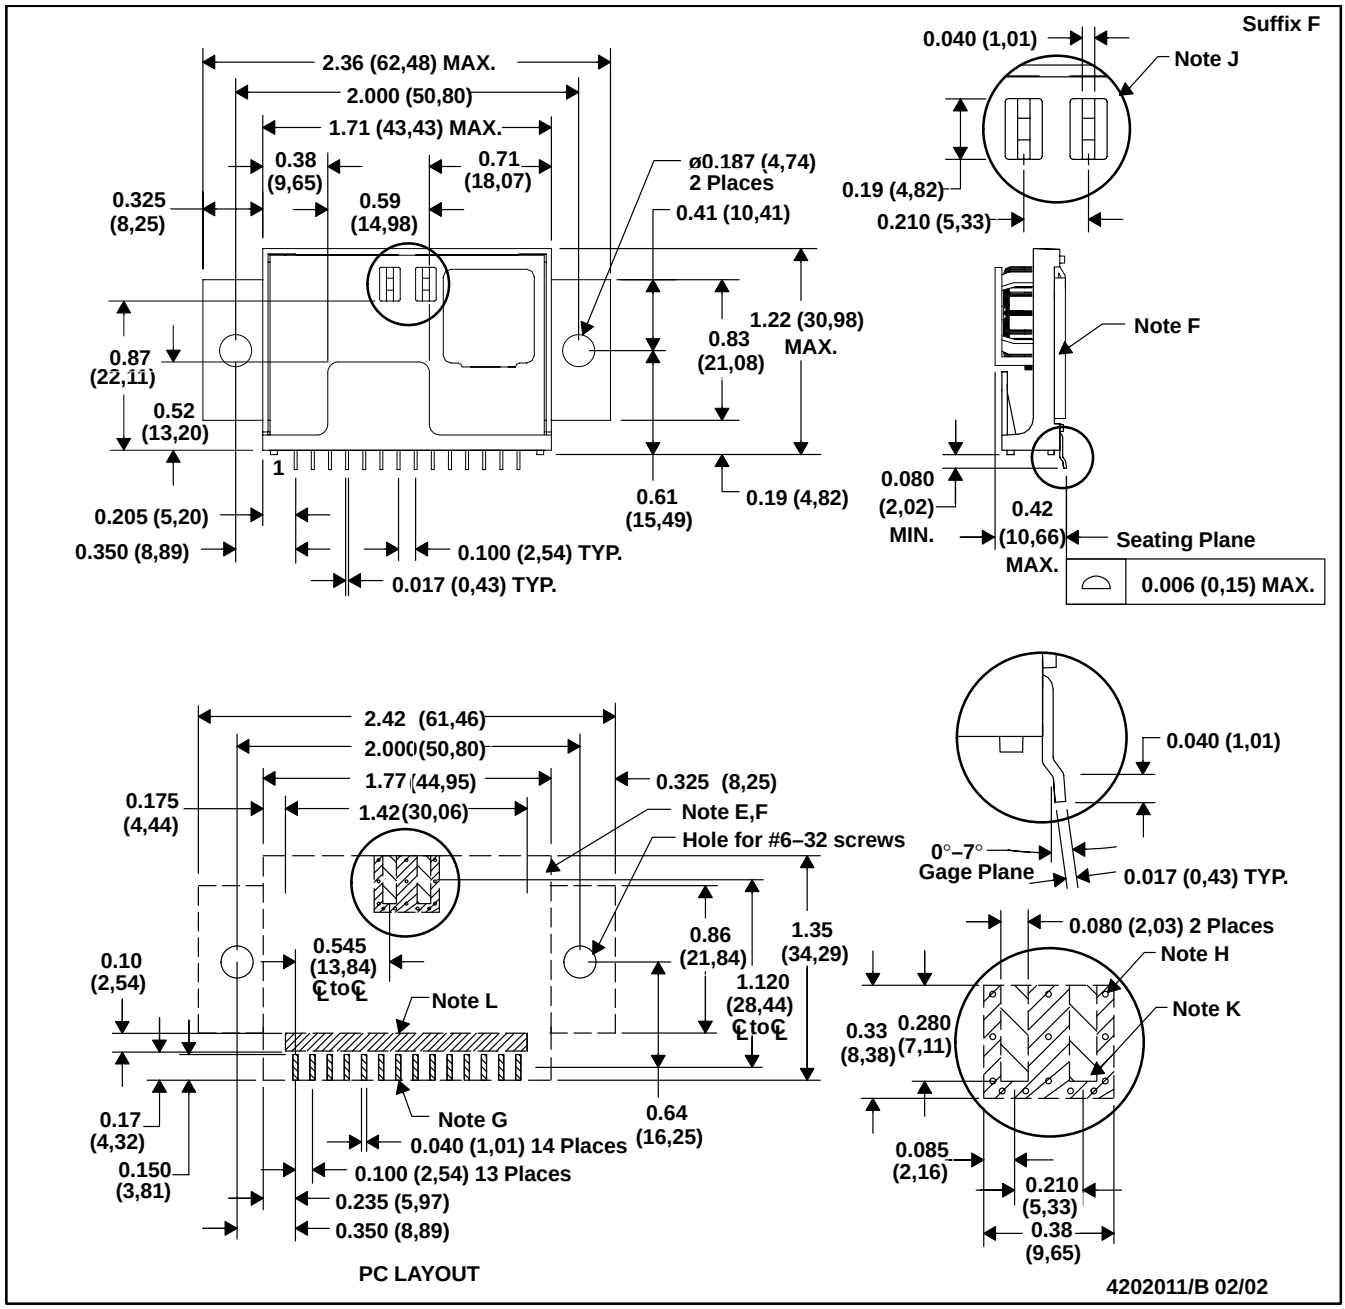
MPSI014A – MARCH 2001 – REVISED FEBRUARY 2002

EEK (R–PSIP–G14) **PLASTIC SINGLE-IN-LINE MODULE**



NOTES:
A. All linear dimensions are in inches (mm).
B. This drawing is subject to change without notice.
C. 2–place decimals are ± 0.030 (± 0,76 mm).
D. 3–place decimals are ± 0.010 (± 0,25 mm).
E. Recommended mechanical keep-out area.
F. The metal tab is isolated but electrically conductive. No signal traces are allowed under the metal tab area. A solid copper island is recommended, which may be grounded.
G. Power pin connections should utilize two or more vias per input, ground and output pin.
H. No copper, power or signal traces in this area.

EEF (R–PSIP–G14) **PLASTIC SINGLE-IN-LINE MODULE**



NOTES:
- A. All linear dimensions are in inches (mm).
- B. This drawing is subject to change without notice.
- C. 2-place decimals are ± 0.030 (± 0,76 mm).
- D. 3–place decimal are ± 0.010 (± 0,25 mm).
- E. Recommended mechanical keep-out area.
- F. The metal tab is isolated but electrically conductive. No signal traces are allowed under the metal tab area. A solid copper island is recommended, which may be grounded.
- G. Power pin connections should utilize two or more vias per input, ground and output pin.
- H. Minimum copper land area required for solder tab. Vias are recommended to improve copper adhesion or connect land to other ground area.
- J. Underside solder tabs detail.
- K. Solder mask openings to copper island for solder joints to mechanical pins.
- L. No copper, power or signal traces in this area.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
